

South Harrison Township Elementary School District

Dr. James J. Lavender
Superintendent of Schools

Mrs. Corinne Mesmer
Principal

February 8, 2018

Dear Parent/Guardian:

The peak of the cold and flu season is upon us and we are seeing higher than normal diagnoses of influenza viruses among students and staff. The New Jersey Department of Health is [reporting](#) widespread influenza (flu) activating throughout the State. The information I am sending to our school community is designed to help you better understand the signs and symptoms of influenza viruses so that our school community can help prevent outbreaks.

The following information below, and attached, are provided to you by the NJ Department of Health. You can go to their site at <http://nj.gov/health/cd/topics/outbreaks.shtml#2> for resources to help with outbreak prevention. You can also go to the District's website and click *parent resources* under *Health Services* at <https://www.krsd.org/Page/973> for additional information.

What is influenza (also called flu)?

The flu is a contagious respiratory illness caused by influenza viruses that infect the nose, throat, and sometimes the lungs. It can cause mild to severe illness, and at times can lead to death. The best way to prevent the flu is by getting a flu vaccine each year.

What are the signs and symptoms of the flu?

People who have the flu often feel some or all of these signs and symptoms that usually start suddenly, not gradually:

- Fever or feeling feverish/chills
- Cough
- Sore throat
- Runny or stuffy nose
- Muscle or body aches
- Headaches
- Fatigue (very tired)
- Some people may have vomiting and diarrhea, though this is more common in young children than in adults

How does the flu spread?

The flu virus is spread mainly by tiny droplets made when people with flu cough, sneeze or talk. These droplets can land in the mouths or noses of people who are nearby. Less often, a person might also get flu by touching a surface or object that has flu virus on it and then touching their own mouth, nose, or possibly their eyes.

When can a person with the flu spread it to others?

Committed to Excellence

You may be able to pass on the flu to someone else before you know you are sick, as well as while you are sick. Although people with the flu are most contagious in the first 3-4 days after their illness begins, some otherwise healthy adults may be able to infect others beginning 1 day **before** symptoms develop and up to 5 to 7 days **after** becoming sick. Some people, especially young children and people with weakened immune systems, might be able to infect others with flu viruses for an even longer time.

Should I get the flu vaccine now?

It is not too late to get vaccinated. All people 6 months of age and older are recommended to annually receive the influenza vaccine. Getting vaccinated yourself protects people around you, including those who are more vulnerable to serious flu illnesses, like babies and young children, older people, and people with certain chronic health conditions. While flu vaccine is not perfect and some people who get vaccinated may still get the flu, there is some data to suggest that flu vaccination may make the illness milder.

How can I protect my child from catching the flu?

In addition to getting an annual influenza vaccine, following everyday preventive actions can help protect your child from the flu and from other contagious illnesses as well. Teach your child to:

1. Wash hands frequently, especially before eating.
2. Get in the habit of not touching his/her eyes, nose or mouth with unwashed hands.
3. Not share "bites" of finger foods, spoons, forks, drinking cups or bottles with friends.

What should I do if my child is sick?

- As always, you should keep your sick child home. **Do not send him/her to school/daycare.** Use your judgement to decide if your child can recover at home with rest and fluids, or needs to see a doctor. Call your family doctor if you have questions, and follow his/her advice.
- Although antibiotics are not effective against viruses, antiviral medicines can help shorten the flu's course. These medications are available only by prescription and are usually not needed in mild cases. Once again, you should follow your family doctor's advice about your child's care.
- Keep tissues close to the sick person and have a trash bag within reach.
- Children who are sick with flu-like illness should **stay home for until they are 24 hours fever free without fever reducing medications.**

For more information go to the New Jersey Department of Health flu website at <http://nj.gov/health/cd/topics/flu.shtml>. Follow on Twitter @njdeptofhealth, facebook at NJDeptofHealth, Instagram @njdeptofhealth and Snapchat @njdoh. If you have general concerns, contact your local health department at 856-218-4101. If you have specific concerns or questions about your child's health, contact your health care provider.

Very truly yours,

Dr. James J. Lavender
Superintendent of Schools
